This study aims to determine the effect of the Flipped Classroom model assisted by Canva media on students' mathematics learning outcomes in the topic of Systems of Linear Equations in Two Variables (SPLDV) among eighth graders at SMP Negeri 1 Tilango. The study employed the method of experimental research with a post-test only control group design. The sampling technique conducted was cluster random sampling. The instrument of the study was an essay-type post-test assessing learning outcomes. Hypothesis testing was conducted using the t-test, which resulted in a $t_{count} = 2,59$, whereas $t_{table} = 1,67$ with $df = 60$ of a significance level of $\alpha = 0,05$ indicating a statistically significant difference at the specified level of significance. By comparing the value of t_{count} with t_{table} , thus, $t_{count} > t_{table}$. Additionally, the effect size calculation using Cohen's d yielded a value of 0,66, which falls into the medium category. Therefore, the use of the Flipped Classroom model assisted by Canva media not only produced statistically significant differences but also had a moderate practical effect on improving students' mathematics learning outcomes in the learning material of SPLDV of eighth graders at SMP Negeri 1 Tilango.

Keywords: Flipped Classroom, Canva, Learning Outcomes, SPEDV

LEMBAR PENGESAHAN SKRIPSI

Skripsi yang berjudul: "Pengaruh Model *Flipped Classroom* Berbantuan Media *Canva* Terhadap Hasil Belajar Matematika Siswa Kelas VIII Pada Materi SPLDV Di SMP Negeri 1 Tilango"
